

Motor connectors:

plug	cable	conduit box	cable to to motor	
A →	yellow	→	yellow	B-
B →	red	→	red	B+
C →	brown	→	brown	A-
D →	pink	→	orange	A+
E →	white	→	white	limit switches
F →	green	→	black	
G →	grey	→	grey	coils
H →	blue	→	blue	

MOT-X (pins G+H) → CRYRING Inside Limit
MOT-X (pins E+F) → CRYRING outside limit

MOT-Z (pins G+H) → Upstream limit (minus)
MOT-Z (pins E+F) → Downstream limit (plus)

Potentiometers:

Plug cable conduit cable
 box to poti

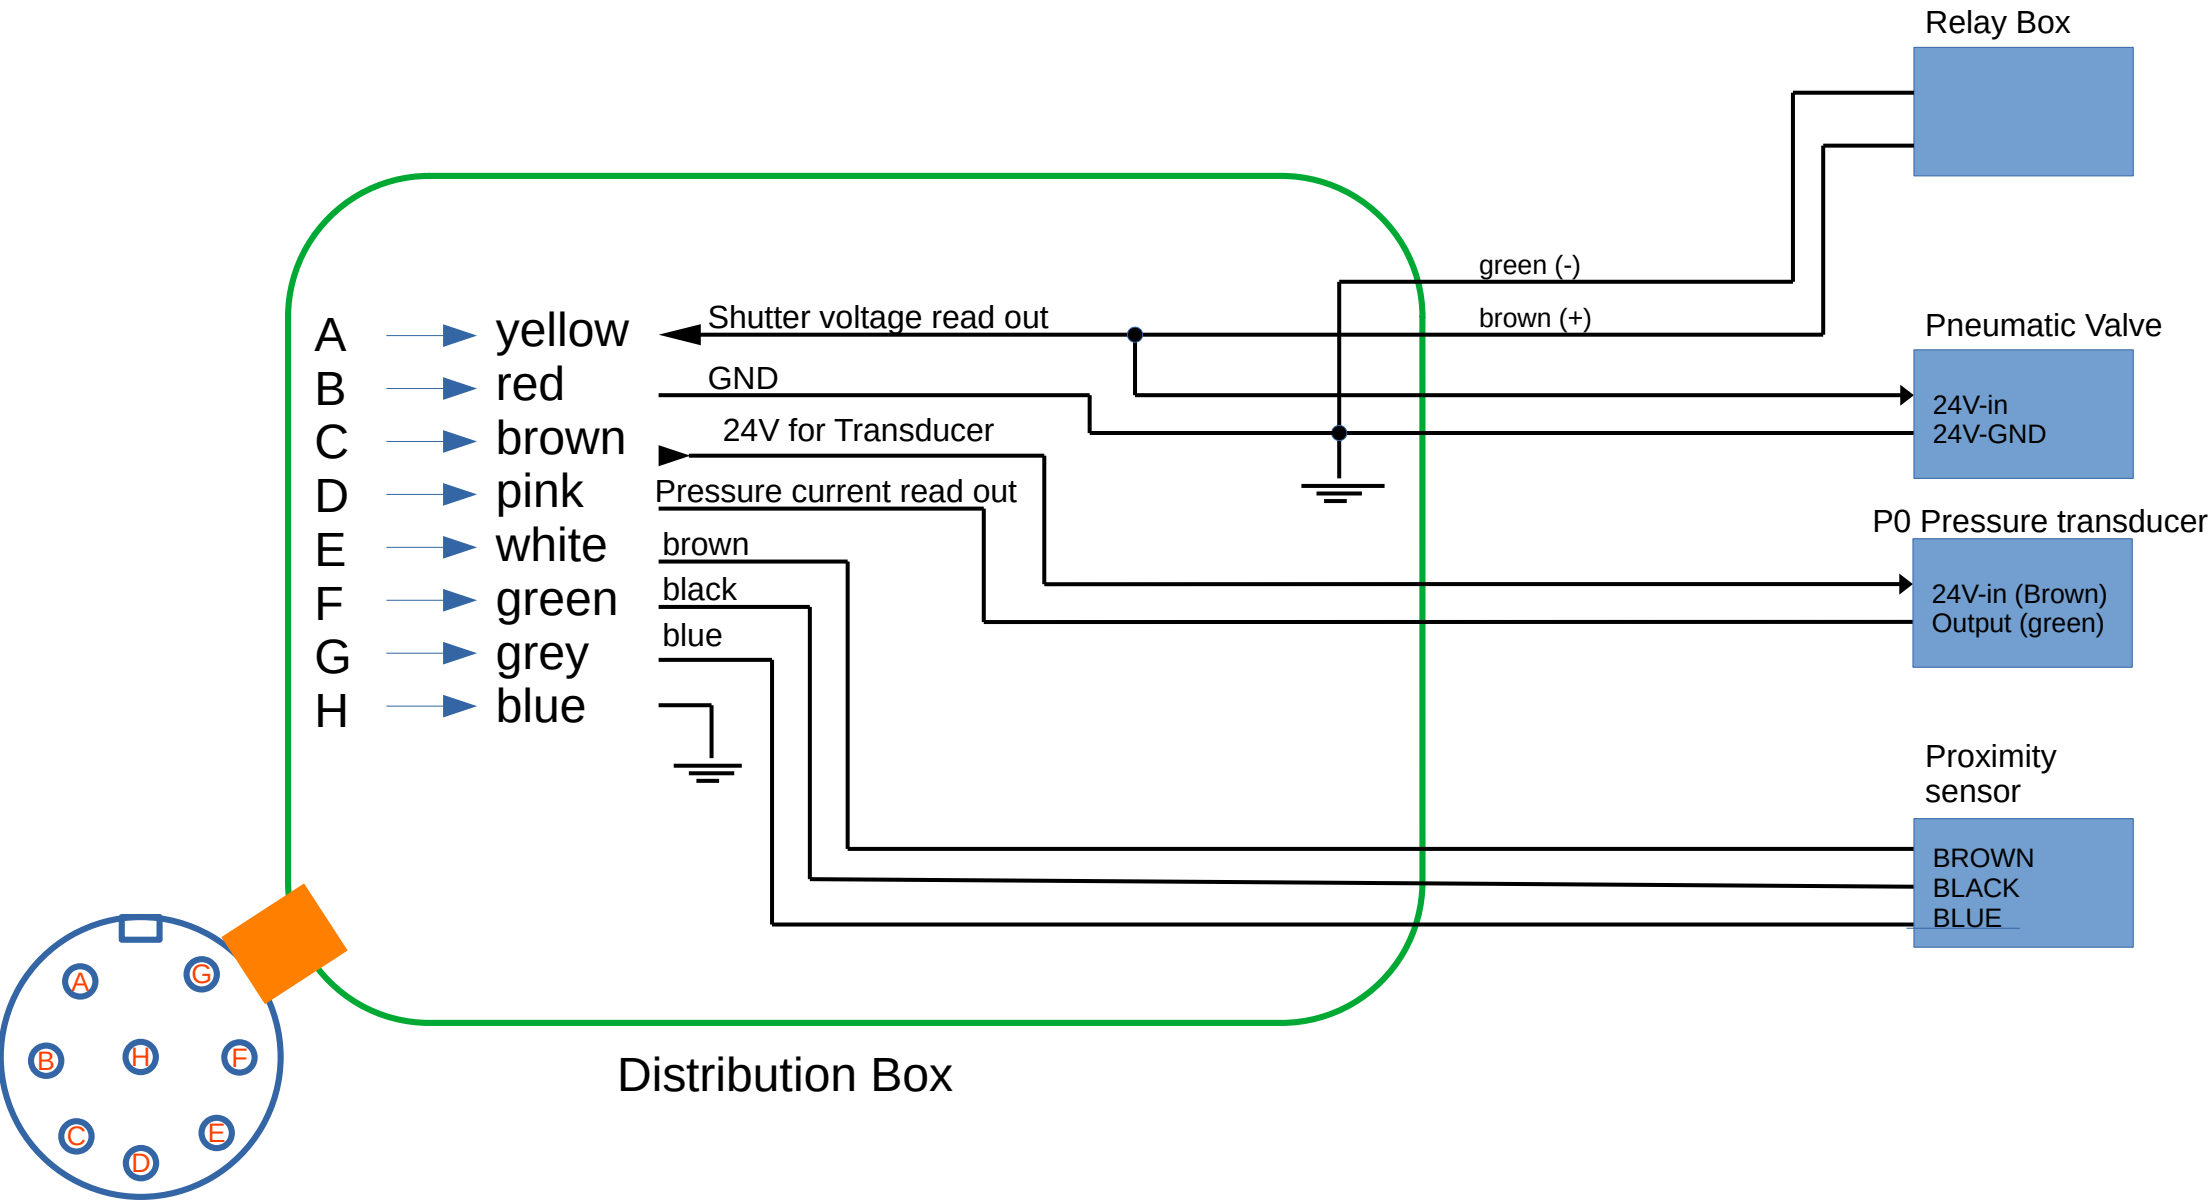

A	→	yellow	→	blue	}	X
B	→	red	→	yellow		
C	→	brown	→	brown		
D	→	pink	→	blue	}	Z
E	→	white	→	yellow		
F	→	green	→	brown		

Directions:

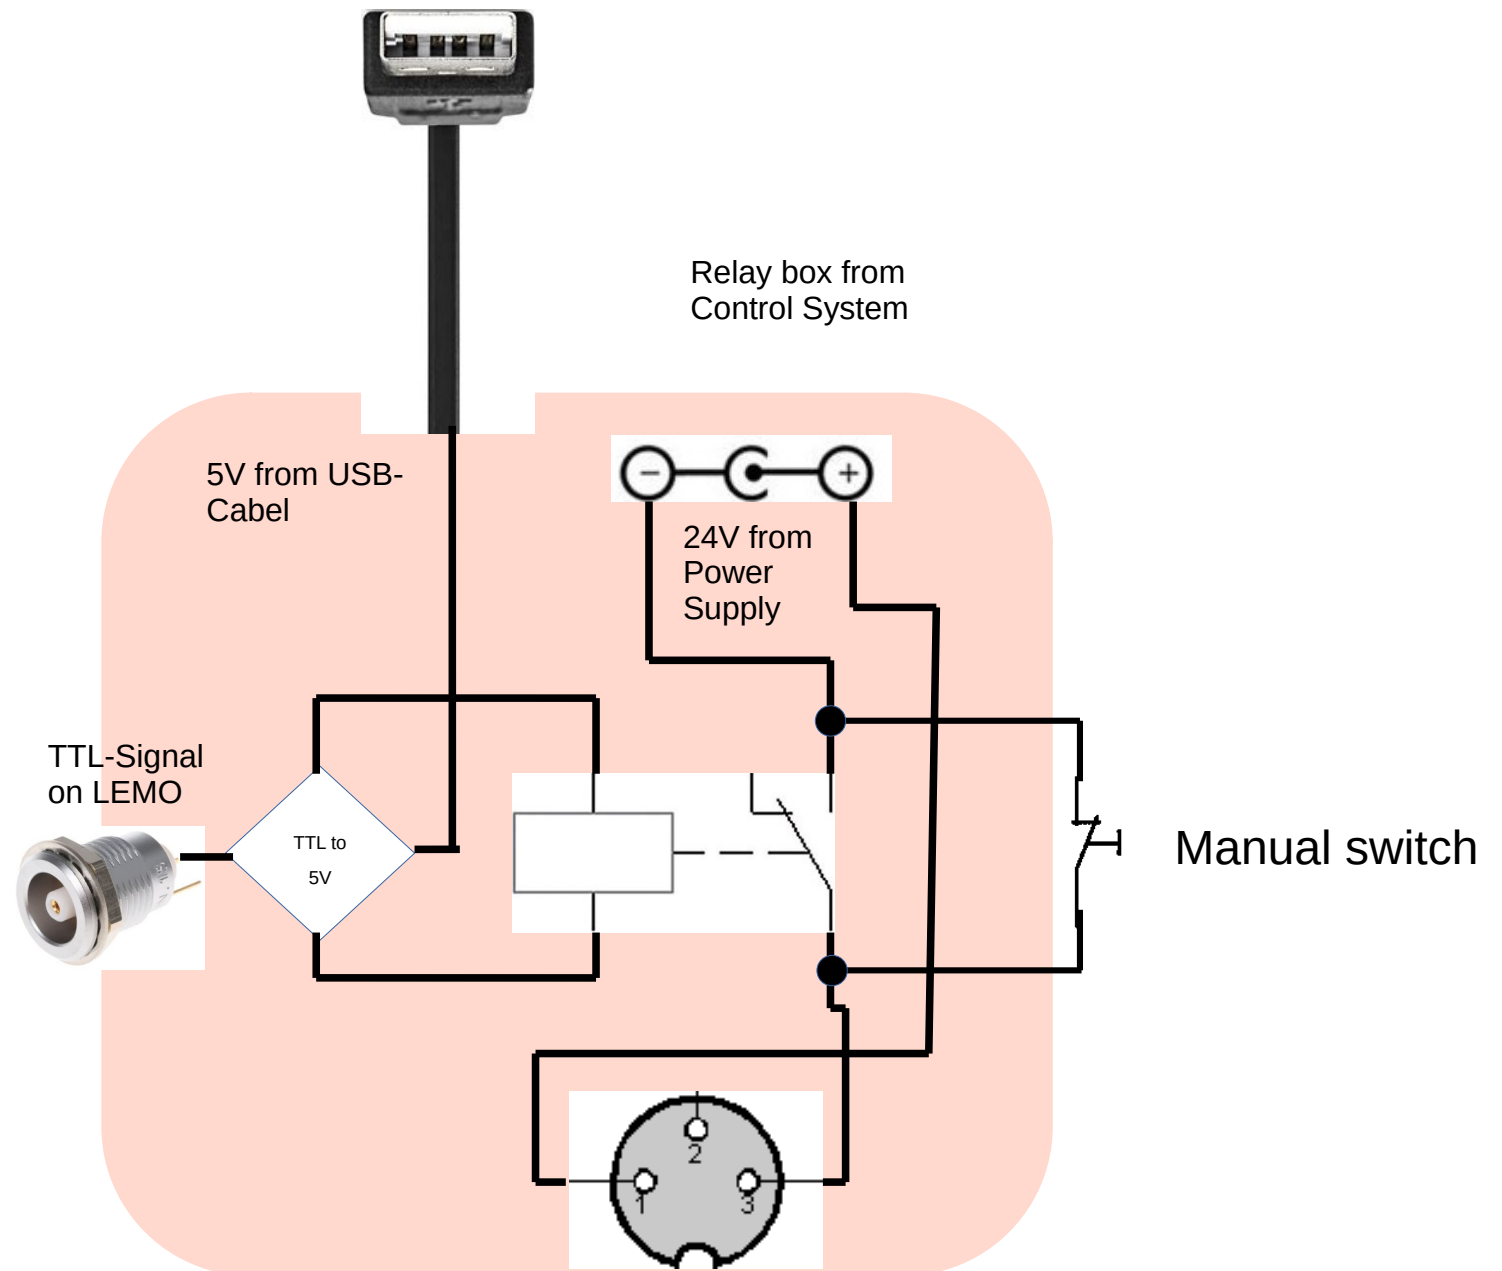

Poti value grows
between yellow pin
and brown (GND), if
poti shaft is pulled
out. Min: 17 Ohm,
Max: 2070 Ohms

Distribution Box:

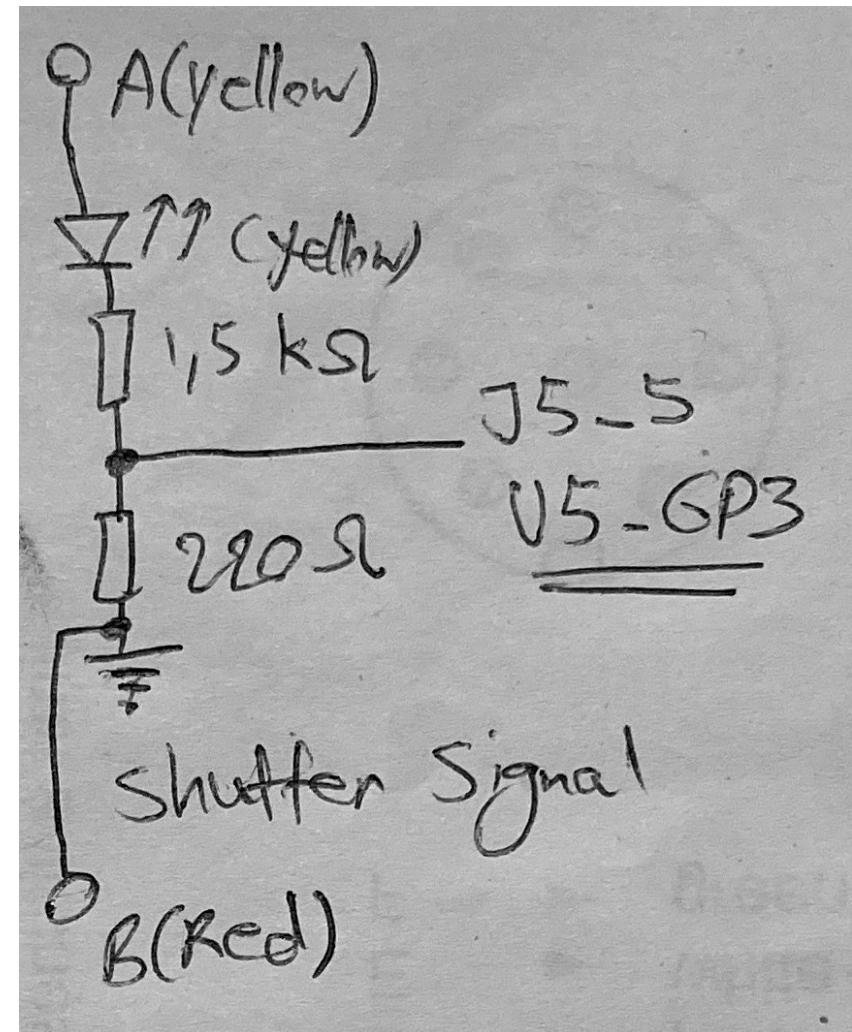

Relay Box:

Shutter signal:

Pneumatic Valve

Model: CPE10-M1B-H-5L-QS-6
Requirements: 24 V DC: 1,28 W

End switches:

End switches

normally closed

Mat-X

End { white → J5-9 (GP7) ^{Ring outside lin}
gray → J5-8 (GP6) _{Ring inside}

Mat-Z

End { white → J5-7 (GP5) ^{down str.}
gray → J5-6 (GP4)

Potentiometers calibration values:

Poti Zero values:

Pot-X

yellow (B) and brown (C):
1.1197 kOhm

Pot-Z

yellow (E) and brown (F):
1.0624 kOhm

X direction:

1.197 kOhm → 182.5 mm → ADC: 2313 → 1,867 V (zero point)

1.953 kOhm → 201.5 mm → ADC: 3793 → 3.057 V (Δ)

Z direction:

1.0624 kOhm → 180 mm → ADC: 2045 → 1.648 V (zero point)

1.875 kOhm → 199 mm → ADC: 3675 → 2.962 V (Δ)

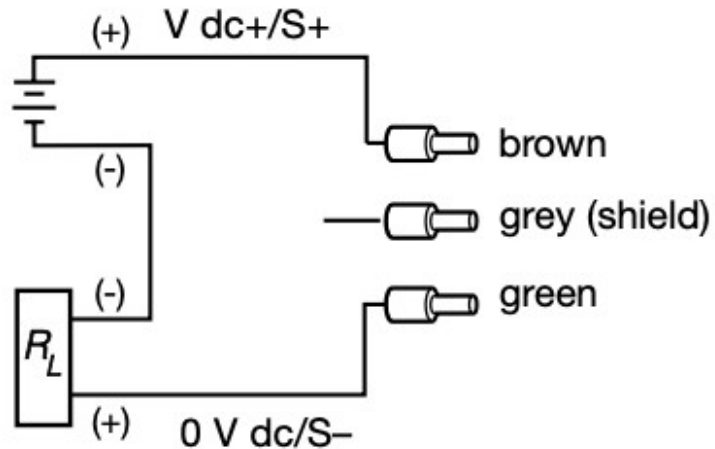

potis
B (pot X
Schleifer)
J9 - Pin 5
ADC-U3
channel ~~0~~
E (POT-Z)
J9 - Pin 4
ADC-U3
channel 1

Pressure transducer:

Pressure Transducer

Model: PTI-S-AG60-12AS-T

**Direct wire,
flying lead**

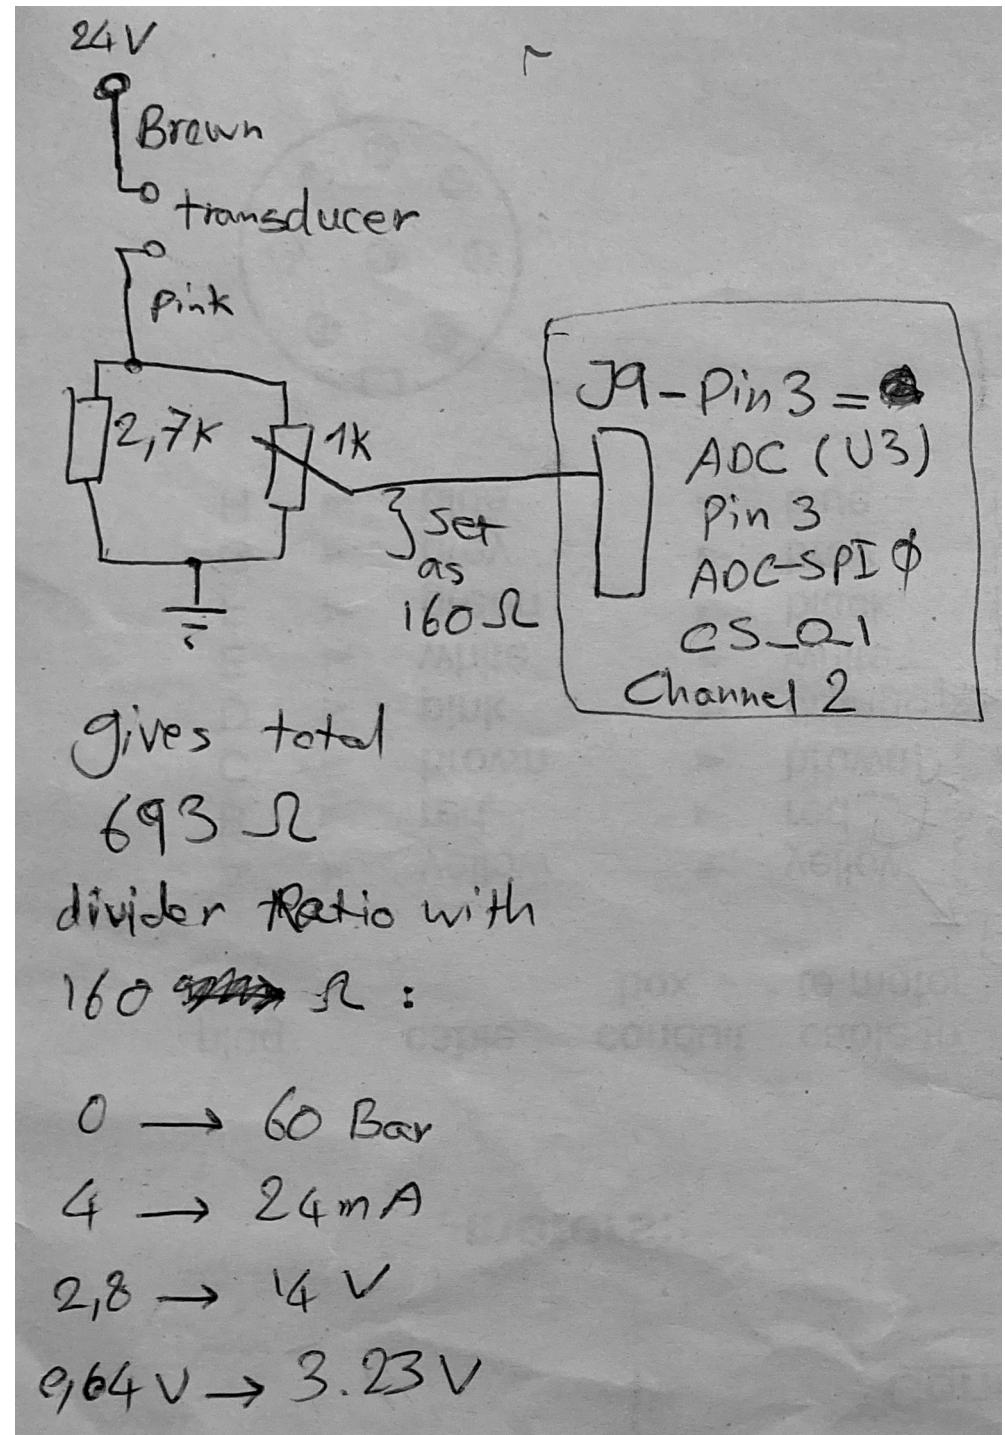

Maximum Load Equations

Milliampere output signal, 2 wire

Output 4 to 20 mA

Supply V dc = 10 to 30 V

Max. Load $R_L = (V \text{ dc} - 10) / 0.02$

Proximity Sensor:

Proximity sensor is installed at beginning of the the shaft. So it only gives a HI when the shutter is out. So the signal is inverted in software in order to match the table.

Shutter	In (Jet off)	Out (Jet on)
GENESYS	HI	LOW
Signal	TRUE	FALSE
Sensor	TRUE	FALSE

Brown (sensor) → E (connector) → white (cable) → +5V
Black (sensor) → F (connector) → green (cable) → signal
Blue (sensor) → G (connector) → gray (cable) → GND

Proximity Sensor:

Proximity Sensor

Model: SMT-8M-A-NO-24V-E-7,5-OE

Technical Data		
Betriebsspannungsbereich	[V AC/DC]	5 ... 30
Max. Ausgangsstrom	[mA]	100
Max. Schaltleistung	[W]	2,8

Wire connections:

Round connectors	Round connector wire	Arriving connector	Jumper-wire color	Connector on Board	Raspberry Pin	Description
E	MOT-X end white	J5-9	yellow	J6-1	16	Ring outside limit X
G	MOT-X end gray	J5-8	blue	J6-2	18	Ring inside limit X
E	MOT-Z end white	J5-7	orange	J6-3	22	Downstream limit Z
G	MOT-Z end gray	J5-6	red	J17-2	32	Upstream limit Z
A	shutter set signal	J5-5	white	J19-2	33	Command from GENESYS
F	shutter sensor signal	direct from side board	green	J19-1	37	HI when shutter out
